• Follow up on report from Manchester that spectra of some organics are not always consistent across instruments
  – Sign-up on Feedback Survey (also separate email)
  – Michael Lechner in my group will coordinate
  – Choose 5 molecules
    • Squalane, DOS, levoglucosan, sucrose, PFK or PFT, succinic acid, fulvic acid (?)
    • + Standard methods of preparation
  – Prepare 100 mg vials from the SAME sample
  – Send them to everyone who is interested
  – People run them in all of their AMSs, and upload spectra to website (along with vaporizer T, V, A etc.)
  – We discuss the comparison of the spectra in the next Clinic users meeting
